About TECHU

TECHU is a future-focused technology skilling platform dedicated to building industry-ready professionals and tech entrepreneurs. We specialize in hands-on training across Full-Stack Development, Generative AI, and Agentic AI, with a strong focus on real-world applications and innovation.

Our Faculty

TECHU's faculty comprises experienced industry professionals, AI practitioners, and startup mentors. They bring real-time industry exposure, practical insights, and project-driven learning to help learners build job-ready and startup-ready skills.

Frequently Asked Questions (FAQ)

1. What are the prerequisites for this program?

Basic knowledge of computers is sufficient. No prior coding experience is mandatory, as the program starts from fundamentals and gradually advances to Full-Stack and AI concepts.

2. Do you provide placement assistance?

Yes. We provide placement assistance through resume preparation, interview guidance, mock interviews, and industry connections. Learners are also guided toward internships, live projects, and startup opportunities.

3. Is this program suitable for entrepreneurs and startups?

Absolutely. The program is designed with an entrepreneur-first approach, focusing on product development, AI applications, and startup readiness along with technical skills.

WHY TECHU ?

Industry-Aligned Curriculum

Designed to match current industry requirements in Full-Stack Development, Generative AI, and Agentic AI.

Hands-On Learning Approach

Learners work on real-world projects and applications, not just theoretical concepts.

Entrepreneur-Focused Training

Encourages startup thinking, product building, and problem-solving from day one.

Full-Stack + AI Integration

Students learn to build complete AI-powered web applications end to end.

Advanced Agentic AI Exposure

Covers autonomous AI agents, task automation, and multi-agent systems beyond basic AI.

Experienced Industry Faculty

Sessions are led by professionals with real-time industry and startup experience.

Live Projects & Capstone

Each learner builds portfolio-ready projects and a final AI product or MVP.

Placement Assistance

Support includes resume building, interview preparation, and job opportunity guidance.

Flexible Learning Modes

Available in online, offline, and hybrid formats to suit different learner needs.

Post-Training Mentorship

Continued guidance for career growth, project improvement, and startup initiatives.

JGI JAIN CENTER FOR SKILLS

Duration:
5 Months

Mode:
Online / Hybrid / Offline

10,000+ Professionals Trained Globally

Full-Stack Development Modules – Detailed Overview

Module 1:

HTML

- Basic Structure
- Semantic Tags
- Forms & Validation
- Tables
- Media (Audio, Video)
- SEO Basics

Module 4:

JavaScript (Core)

- Variables (var, let, const)
- Data Types • Operators
- Functions • Arrays & Objects
- Loops • DOM Manipulation
- Events • Promises
- ES6+ (Arrow, Destructuring, Spread)
- Async/Await • Fetch API

Module 7:

React JS – Intermediate

- Use State
- Use Effect
- Forms (Controlled Components)
- React Router
- Context API
- API Calls (Fetch / Axios)

Module 10:

Express.js

- Creating Server
- Routing
- REST API
- Middleware
- Request & Response
- Error Handling
- JWT Authentication
- Role-based Authorization

Module 13:

Authentication & Security

- JWT
- Bcrypt
- Cookies
- CORS
- Helmet
- Rate Limiting
- Password Hashing
- OAuth

Module 16:

Real Projects

- Todo App
- CRUD App
- Blog Application
- Authentication System
- Admin Dashboard
- E-commerce Application

Module 2:

CSS

- Selectors • Box Model
- Positioning • Flexbox
- Grid • Animations
- Responsive Design
- Media Queries
- Pseudo-classes & Pseudo-elements
- Transitions

Module 5:

Git & GitHub

- Git Basics
- Branching
- Merging
- Pull Requests
- Collaboration Workflow

Module 8:

React JS – Advanced

- Use Reducer
- Performance Optimization (Use Memo, Use Callback)
- Code Splitting & Lazy Loading
- Protected Routes (Authentication)
- Redux Toolkit

Module 11:

MongoDB

- NoSQL Basics
- CRUD Operations
- Schema Design
- Indexing
- Aggregation
- Relationships
- MongoDB Atlas

Module 14:

MERN Stack Integration

- Connecting React to Backend
- Axios
- Protected Routes
- File Upload (Multer)
- Form Handling
- Error Handling

Module 17:

Generative AI

- Introduction to LLMs
- Prompt Engineering
- Developing Designs and Logics through AI
- Text & Image Generation
- Chatbot Integration (Frontend + Backend)
- Token Management & Cost Optimization

Module 3:

Bootstrap

- Grid System
- Layout & Containers
- Components (Navbar, Cards, Buttons, Modals)
- Forms • Utilities
- Responsive Design with Bootstrap
- Customization

Module 6:

Git & GitHub

- SPA Concept
- JSX
- Components
- Props
- State
- Event Handling
- Conditional Rendering
- Lists & Keys

Module 9:

Node.js

- What is Node
- Event Loop
- NPM
- Modules
- File System
- HTTP Module
- Environment Variables
- Middleware Concept

Module 12:

Mongoose

- Schema & Models
- Validation
- Middleware
- Populate
- Query Methods

Module 15:

Deployment

- Environment Variables
- Build React App
- Deploy Backend (Render / Railway)
- Deploy Frontend (Vercel / Netlify)
- MongoDB Atlas Connection

Module 18:

Agentic AI

- What is Agentic AI
- AI Agents vs Chatbots
- Tool Calling (Function Calling)
- Multi-step Reasoning
- Memory Management
- RAG (Retrieval-Augmented Generation)
- Building AI Agents (Frontend + Backend Integration)
