

Program Outcomes

Industry-Ready UI/UX Designer with AI Integration Skills

Design AI-powered digital products and user experiences

Build and automate design workflows using Generative & Agentic AI

Create strong digital brands and scalable product interfaces

Develop entrepreneurial mindset for launching digital products and startups

About TECHU

TECHU is a future-focused digital skilling and innovation platform committed to building industry-ready UI/UX professionals and digital product creators. We deliver hands-on training in UI/UX Design, Design Systems, User Research, Prototyping, and AI-powered design automation, with a strong emphasis on real-world projects, creativity, and business-driven product development powered by Generative and Agentic AI.

Our Faculty

TECHU's faculty consists of experienced UI/UX designers, product designers, AI practitioners, design strategists, and startup mentors. They bring real-time industry exposure, practical insights, and project-driven learning to help learners become job-ready, product-ready, and entrepreneur-ready.

Frequently Asked Questions (FAQ)

1. What are the prerequisites for this program?

Basic computer knowledge is sufficient. No prior design or coding experience is required, as the program starts from fundamentals of UI/UX and gradually advances to AI-powered design workflows and product creation.

2. Do you provide placement or career assistance?

Yes. We provide career and placement assistance including:

- Resume building
- UI/UX portfolio development
- Case study preparation
- Interview preparation
- Freelancing guidance
- Internship & live project support

3. Is this program suitable for entrepreneurs and startup founders?

Absolutely. The program follows an entrepreneur-first approach, helping learners design digital products, validate ideas, build MVP interfaces, and leverage AI tools for automation and scalability.

WHY TECHU ?

1. Industry-Aligned Curriculum

Designed to match current industry standards in UI/UX Design, Product Design, Generative AI, and Agentic AI workflows.

2. Hands-On Learning Approach

Students work on real-world UI/UX projects, design systems, prototypes, and AI-assisted design automation.

3. Entrepreneur-Focused Training

Encourages product thinking, startup validation, and digital business design from day one.

4. UI/UX + AI Integration

Learn to design complete digital products with strong user experience, visual branding, and AI-driven automation.

5. Generative & Agentic AI Exposure

Covers AI tools for UI generation, UX research automation, content generation, autonomous agents, and workflow automation.

6. Experienced Industry Faculty

Sessions led by experienced UI/UX professionals, AI specialists, and product mentors.

7. Live Projects & Capstone

Each learner builds portfolio-ready UI case studies and completes an AI-integrated digital product project.

8. Career & Placement Assistance

Support includes portfolio creation, resume building, interview prep, freelancing guidance, and job opportunities.

9. Flexible Learning Modes

Available in online, offline, and hybrid formats.

10. Post-Training Mentorship

Ongoing mentorship for career growth, freelancing, product launches, and AI adoption

Our Address

UI/UX Designing + Generative AI

Duration:
4 Months

Mode:
Online / Hybrid / Offline

10,000+ Professionals Trained Globally

UI/UX Designing + Generative AI Course Curriculum

Module 1:

Introduction to UI/UX & Design Fundamentals

- What is UI vs UX
- Design thinking process
- Principles of good design
- User-centered design approach
- Understanding digital product lifecycle

Module 2:

Design Principles & Visual Foundations

- Typography fundamentals
- Color theory & psychology
- Layout and grid systems
- Spacing & alignment
- Visual hierarchy

Module 3:

UX Research & User Analysis

- Types of UX research
- User interviews & surveys
- Competitor analysis
- Creating user personas
- Empathy mapping

Module 4:

Information Architecture

- User flows
- Sitemap creation
- Card sorting
- Navigation patterns
- Content structuring

Module 5:

Wireframing & Low-Fidelity Design

- Sketching concepts
- Paper wireframes
- Low-fidelity digital wireframes
- Rapid prototyping basics

Module 6:

High-Fidelity UI Design

- Designing mobile applications
- Designing web applications
- UI components & design systems
- Responsive design concepts

Module 7:

Prototyping & Interaction Design

- Interactive prototypes
- Micro-interactions
- Animation basics
- Usability testing preparation

Module 8:

Usability Testing & UX Optimization

- Conducting usability testing
- A/B testing fundamentals
- Heuristic evaluation
- Feedback analysis
- Iterative improvements

Module 9:

Introduction to Generative AI for Designers

- What is Generative AI
- AI in design workflows
- Prompt engineering basics
- Ethical considerations in AI

Module 10:

AI for UI Design Creation

- Generating UI layouts using AI tools
- AI-based color palette generation
- AI-based typography suggestions
- Rapid concept generation

Module 11:

AI for UX Research & Content

- AI for persona creation
- AI-driven user journey mapping
- AI-generated UX copy
- AI for competitor analysis

Module 12:

AI-Powered Prototyping & Automation

- Converting sketches to UI using AI
- AI wireframe generators
- Automating design systems
- AI-assisted accessibility improvements

Module 13:

AI Image & Asset Generation

- Generating icons and illustrations
- AI-based image editing
- Creating marketing visuals
- Brand kit generation using AI

Module 14:

No-Code & AI Website Builders

- AI website generation tools
- No-code platforms integration
- AI chatbots for websites
- AI landing page optimization

Module 15:

Capstone Project – AI Integrated Product Design

- End-to-end product design project
- UX research + AI integration
- Full UI design prototype
- AI-generated assets implementation
- Final presentation & portfolio development
